Triangular Numbers

$$\frac{n}{1} \quad \frac{T_n}{1} = \frac{1}{2} n(n+1)$$

$$1 \quad 1$$

$$2 \quad 1+2=3$$

$$3 \quad 1+2+3=6$$

$$4 \quad 1+2+3+4=10$$

$$5 \quad 1+2+3+4+5=15$$

$$6$$

$$7$$

$$8$$

$$9$$

$$10 \quad 1+2+\dots+10 = \boxed{55}$$

Square Numbers

$$\frac{n}{1} \quad \frac{S_n}{1} = n^2$$

$$1 \quad 1$$

$$= 0+1 \quad \text{special case}$$

$$2 \quad 1+3=4$$

$$= 1+3 = T_1+T_2 \quad \checkmark$$

$$3 \quad 1+3+5=9$$

$$= 3+6 = T_2+T_3 \quad \checkmark$$

$$4 \quad 1+3+5+7=16$$

$$= 6+10 = T_3+T_4 \quad \checkmark$$

$$5 \quad 1+3+5+7+9=25$$

$$= 10+15 = T_4+T_5 \quad \checkmark$$

$$6$$

Show that 2 triangular numbers sum
to a square number

$$T_n + T_{n-1} = \frac{1}{2} n(n+1) + \frac{1}{2} (n-1)n$$

$$= \frac{1}{2} n^2 + \frac{1}{2} n + \frac{1}{2} n^2 - \frac{1}{2} n$$

$$= n^2 = S_n$$

Know squares up to $32^2 = 1024$

Puzzle #1

What is the smallest number of balls that can first
be arranged as a square $\begin{matrix} 000 \\ 000 \\ 000 \end{matrix}$ and then

arranged in a square pyramid?

One solution: 4900

Which pyramidal number is 4900?

Puzzle #2

You have two same-sized tetrahedrons
and want to combine them into a single
large tetrahedron. What is the minimum
number of balls/oranges for which you
can do this? Ans: 20 balls/oranges

Tetrahedral Numbers

$$\frac{n}{\quad} \quad \frac{TH_n}{\quad} = \frac{1}{6} n(n+1)(n+2)$$

$$1 \quad 1$$

$$2 \quad 4$$

$$3 \quad 10$$

$$4 \quad 20$$

$$5 \quad 35$$

$$6 \quad 56$$

$$7 \quad 84$$

$$8 \quad \vdots$$

Square Pyramidal Numbers

$$\frac{n}{\quad} \quad \frac{SP_n}{\quad} = \frac{1}{6} n(n+1)(2n+1)$$

$$1 \quad 1$$

$$2 \quad 1+4=5 \quad = 4+1$$

$$3 \quad 1+4+9=14 \quad = 10+4$$

$$4 \quad 1+4+9+16=30 \quad = 20+10$$

$$5 \quad 1+4+9+16+25=55 \quad = 35+20$$

$$6 \quad \vdots$$

Sphere packing

3rd row = 2 choices

- hexagonal close-packing
- cubic close-packing

Each has the same density of

$$\frac{\pi}{\sqrt{18}} \approx 0.74 = 74\% \text{ believed to be the best possible}$$

Dropping balls randomly gives a density of 0.59 to 0.63

Puzzle #3

A rectangular box is 10 in \times 10 in \times 5 in

What is the largest number of spheres 1 inch in diameter that can be packed in the box?

Hint: balls may not be stacked on top of each other
